Product Overview

Swipe up the screen to unlock

A Key and B Key: These keys correspond to the left and right translation languages on the display interface.

Return Key: Short press to return to the previous operation.

Power Button: Short press to lock the screen or wake up the screen.

Volume Button: Adjust the volume up and down.

Type-C Port: Used for connecting a Type-C cable and charging.

Wireless Connection Guide

- 1.** This device supports Wi-Fi, so please select the Wi-Fi network that suits your current usage environment.
- 2.** After powering on the device, connect it to the wireless network.
- 3.** Go to Settings → Wi-Fi to configure the wireless network. Make sure to turn on the wireless network.
- 4.** Select your desired Wi-Fi network and enter the password to connect.

Device Charging

- 1.** If the device is low on power, some functions may not be available. The device will automatically shut down when the battery level drops below 3.4V.
- 2.** In this case, you need to charge the device in order to continue using it.
- 3.** While the device is charging and turned on, the battery icon in the upper-right corner of the screen will display a "lightning" icon.

Powering On and Off

- 1.** Power On: Press and hold the power button on the left side of the device until the power-on screen appears. Device initialization will take a few moments, so please be patient.
- 2.** Power Off: Press and hold the power button on the left side to bring up a dialog box. Select the "Shutdown" option to turn off the device.

Screen On and Off

To turn the screen on or off, you can manually control it by pressing the power button on the left side of the device. Pressing the button will turn off the screen, and pressing it again when the screen is off will turn it back on. The device also has an automatic screen turn-off feature. If there is no operation within the sleep time set by the system, the screen will automatically turn off. To wake the screen, simply press the power button briefly.

Home Screen

The home screen serves as the main function hub of the device, offering a total of 18 operation options. These options include voice translation, offline translation, photo translation, simultaneous interpretation, quick chat translation, remote translation, input translation, intelligent recording, reading, bookmarking, ChatGPT, AI assistant, exchange rate conversion, unit conversion, offline package management, calculator, stopwatch, and settings. To access any of these functions, simply click on the corresponding option on the home screen.

Status Bar

At the top of the device screen, you'll find various status information about the device, including the Wi-Fi network status and battery level. This helps you monitor the device's current state and connectivity.

Main Functions

1. Speech Recognition

To enter voice recognition mode, long press the voice input button on

the device. The A voice button corresponds to the language on the left side of the homepage, while the B voice button corresponds to the language on the right side. Once you release the button, the device will automatically recognize and analyze the voice, translating it into the set target language for voice broadcasting (depending on the settings). The list will display text records of voice translations. If there are many translation records, swipe up and down the page to view them. In case the translation machine is offline, it will automatically switch to offline translation. To select a language, simply click the language button at the top of the translation homepage, which will open the language selection list.

2. Voice Translation

The device currently supports real-time translation between languages in 138 countries and regions (this may change with version updates). To select a source or target language, click the language button at the top of the translation homepage. Then, choose your desired source and target language options.

3. Offline Translation

The device currently supports real-time translation between languages in 21 countries and regions (this may change with version updates). To use offline translation, the necessary language package must first be downloaded. Once downloaded, the package needs to be initialized while connected to the network.

4. Photo Translation

4.1 To select the source and target languages, click the language button at the top of the photo translation homepage. From the language selection list, choose your desired languages.

4.2 To begin, click on the screen to focus on the image or text that needs translation. Adjust the recognition range as needed, then the translation result will appear once recognition is complete.

5. Simultaneous Interpretation

5.1 Simultaneous interpretation requires an internet connection. The device supports ultra-fast AI translation within 1 minute.

5.2 To start voice recognition, press and hold either the A or B key. After completing the translation, you'll need to scan the code again for further translation.

5.3 The device supports browser/chat application scanning and will synchronously display content on mobile devices. You can also download and save content for data editing.

Quick Chat Translation

1. To create a multi-person chat, ensure the device has not already joined a chat.

2. After entering, share the QR code or ID number with others to form a group chat, or scan the code to join an existing one.

3. To add a team member, scan the code or enter the device number.

4. Click the button in the upper-right corner and select the "Member Management" option.

5. To exit multi-person translation, click the "Exit Mutual Translation" option.

6. To manage members, click the "X" on the right side of the member list.

7. Click on the language option in the upper-right corner and select your preferred language.

8. For advanced settings, click the button in the upper-right corner and choose the "Language Selection" option.

Remote Translation

Remote translation requires an internet connection. This feature

supports scanning codes for up to 3000 participants in browsers and chat applications. Scan the code to enter the chat interface, then select your desired language option. After exiting, you will need to scan the code again to continue with the translation.

Input Translation

To use the Google Input Method, click on the keyboard to download and install the necessary voice commands. After that, click on any blank area to input text, and the translation will appear in real-time as you type.

Intelligent Recording

1. The target language only supports offline translation, with a maximum duration of 60 minutes.
2. Select the target language and translation language from the options in the upper-right corner.
3. To view the original text or translation, click on the language switching icon in the bottom-left corner.
4. During the recording process, click on the red stop icon and select "Save File."
5. To view the recording, click the button in the upper-right corner to import the recording file.
6. Recording Text Storage Location: On your computer, navigate to the "Recording Translation" folder.

Settings

1. Wi-Fi Settings: Configure the device's Wi-Fi network.

2. **Broadcast Mode:** Choose between automatic broadcast and manual broadcast modes. In plug-in mode, the translation result must be manually clicked to speak.
3. **System Language:** Access the language interface to select the device's preferred language.
4. **Bluetooth:** Configure and connect Bluetooth devices.

Practical Tools

The following practical tools are available for various tasks, including learning and calculations: Follow reading, Bookmarking, ChatGPT (self-payment required), AI Assistant (only available in China), Exchange rate conversion, Unit conversion, Offline package management, Calculator, and Stopwatch.

Online Upgrade

When a new version is available, the device will automatically detect the update upon language switching, restarting, or after 24 hours. The device supports upgrades in various network environments.
